Innovation and Incubation Policy

Preamble:

Recognizing the transformative potential of innovation and entrepreneurship in driving scientific advancement, economic growth, and societal progress, Govt. Holkar (Model Autonomous) Science College, Indore, is committed to fostering a vibrant culture of innovation, creativity, and enterprise within its academic community. The institution has registered in the Institution's Innovation Council-An Initiative of the Ministry of Education.

Introduction:

This Innovation and Incubation Policy aims to:

Nurture Creative Thinking: Encourage and support students, faculty members, and researchers to think creatively, explore novel ideas, and develop innovative solutions to address local and global challenges.

Promote Entrepreneurial Spirit: Cultivate an entrepreneurial mindset among our students by providing access to resources, mentorship, and opportunities that empower them to transform their innovative ideas into viable ventures.

Facilitate Collaboration: Create a collaborative ecosystem that facilitates interdisciplinary interactions, industry partnerships, and knowledge exchange, fostering an environment conducive to innovation.

Support Research Commercialization: Enable the translation of research outcomes and intellectual property generated within the college into products, services, and technologies that benefit society and contribute to economic growth.

Provide Incubation Infrastructure: Establish dedicated incubation spaces equipped with state-of-the-art facilities, technology support, and a conducive work environment for startups and entrepreneurial ventures.

Offer Capacity Building: Organize training programs, workshops, seminars, and mentorship sessions to equip aspiring entrepreneurs with essential skills, knowledge, and business acumen.

Facilitate Funding Access: Provide guidance and support in accessing funding opportunities, grants, and seed capital for startups and innovative projects initiated by the college community.

Promote Sustainability and Social Impact: Encourage the development of solutions that address environmental, social, and economic challenges, promoting sustainable development and positive societal change.

Embrace Diversity and Inclusion: Ensure that all members of the college community, regardless of background or discipline, have equal access to innovation resources and opportunities.

Measure and Evaluate Impact: Regularly assess the effectiveness of this policy, tracking the progress of startups, innovations, and entrepreneurial activities stemming from the college.

The institution is doing preincubation as well as Incubation to nurture and promote start-up activities:

Key elements of the implementation of this Policy are:

Infrastructure and Facilities: Establishing physical spaces such as innovation hubs, research parks, and incubators that provide startups and entrepreneurs with access

to necessary resources, such as office spaces, labs, equipment, and collaborative environments.

Funding and Financial Support: Offering various forms of financial support, including grants, loans, equity investments, and tax incentives, to help startups cover their initial costs, research and development, and scaling efforts.

Education and Training: Providing training, workshops, mentorship programs, and networking opportunities to help entrepreneurs enhance their skills, business acumen, and technical knowledge.

Intellectual Property (IP) Protection: Implementing mechanisms to safeguard intellectual property rights, such as patents, copyrights, and trademarks, to encourage innovation while protecting the interests of creators and inventors.

Regulatory and Legal Reforms: Streamlining and simplifying regulatory processes to reduce barriers for startups, including faster business registration, licensing, and permitting procedures.

Collaboration and Partnerships: Facilitating collaborations between startups, research institutions, universities, corporations, and other stakeholders to encourage knowledge exchange, research commercialization, and technology transfer.

Market Access and Commercialization: Assisting startups in accessing markets, customers, and investors, both domestically and internationally, to accelerate their growth and market reach.

Support for Research and Development (R&D): Providing grants and incentives to encourage research and development activities, as well as fostering a culture of innovation within academic and research institutions.

Ecosystem Development: Creating a vibrant ecosystem that encourages entrepreneurship by connecting startups with investors, mentors, accelerators, and other resources for eg. Boot camps.

Monitoring and Evaluation: Continuously assessing the impact and effectiveness of innovation and incubation policies, and making adjustments as needed to ensure their success.

Diversity and Inclusion: Promoting diversity and inclusion within the startup and innovation ecosystem to ensure that underrepresented groups have equal access to opportunities and resources.

Collaborations: Engaging in collaborations and partnerships to share best practices, leverage global expertise, and facilitate cross-border innovation and technology transfer.

The ultimate aim of innovation and incubation policies is to stimulate economic growth, create jobs, and drive technological advancement through the support and nurturing of innovative ideas and startups.

This Innovation and Incubation Policy reflects our commitment to nurturing a culture of innovation, entrepreneurship, and continuous learning, contributing to advancing science and technology, and fostering economic prosperity in the region.

Innovation Cell

Detailed Report

Innovation Cell

Detailed Report

Innovation cell has been formed at Govt. Holkar (Model Autonomous) Science College, Indore to promote entrepreneurship among formal and nonformal students. The Cell promotes technological innovation, research, and entrepreneurial endeavours. The cell inspires and encourages students to develop a scientific mindset and provides a platform for incubating their creative ideas into commercially viable solutions.

Consequently, the primary objective of this Cell is to generate creative design intuition in diverse domains of sciences using an aesthetic perspective. Innovation Cell will support students and promote young, talented minds by providing them with an ideal platform for demonstrating their abilities, working in teams, and competing in various events. It will also provide a platform for students to excel in their particular area of interest.

Purposes of the Cell

- To encourage students to reveal their latent abilities in various disciplines of sciences.
- To provide a platform for individuals to realise and believe in their own worth and ideas.
- ➤ To encourage students to pursue entrepreneurial endeavours.
- To foster an environment where students can discover, develop, apply, and express their abilities, ideas and talents.
- To encourage students to participate in Hackathons, Career events and prototype creation of products, as well as Technical Tutorials.

| 5 | Number of Students Participated in the activity: | 398 | |
| 6 | Report of the Activity (in 100 words): | Innovations and consultancy are the key for the Sustainable Development of society. In particular, innovations are the blueprint to achieve a better and more sustainable future for all. These innovations address the global challenges we face for mankind, green earth and energy, climate change, environmental degradation, etc. Therefore, the present workshop is intended to focus on some of these points, will provide a better prospective to the faculties and students for critical thinking to innovate, take up mentoring assignments or consultancies in near future. | |
| | | Furthermore, the UN's sustainable goal 07 is of particular interest as it indicates the affordable and clean energy for all of us. There is a need of considerable and sincere efforts for not only innovations in this field but also for public awareness at large. | |
| | | Particularly, Dr. Chetan Singh Solanki , a professor from IIT Bombay, Brand Ambassador of Solar Energy for Govt. of MP, and Founder, Energy Swaraj Foundation, has pledged not to go home until 2030 | |

and live & travel in the solar bus. He is a alumnus of Holkar Sci College, Indore, We have requested him to address for keynote in event as he is traveling all around the India so could not make his physical present in the event. However, he has shared his blessing for event via a video message.

May I request to play the video.

| 06 | Report of the activity | ETP plant is waste water treatment plant used for treating contaminants in the form of organic matter, inorganic matter, heavy metals, suspended solids. Knowing the importance of quality of underground water, the department of chemistry, holkar science college, Indore developed and designed ETP for lab effluent. The plant was designed to remove the impurities in various steps. The ETP plant consist of mainly three types of tank known as sedimentation tank, chemical feed tank and aeration chamber. The sedimentation tank collects the effluent and it is allowed to settle down under gravity. The settled sludge is removed manually. The effluent is passed at a steady rate through the controlled valve into the chemical treatment chamber. Thereafter chemical is added to neutralize the effluent with constant stirring in it. Due to constant stirring small flocculent is converted into bigger size. The treated effluent is then passed in adsorption duct containing activated charcoal for adsorption of particles. Slower flow rate of effluent increase the adsorption rate. The impurities get segregated and after this it is moved in aeration chamber. The DO level of |

| | | treated water is increased with a provision provided in the aeration chamber. It has been found that DO level increases once the treated water is collected in aeration chamber followed by process to improve DO level. This water is than passed in soak pit consisting of Pebbles which helps in further filteration before water reaches the ground. Students performed experiments to check the efficiency of ETP analysing DO, COD, TDS, pH, Hardness, conductivity before and after treatment. Studies revealed that TDS was reduced after treatment. pH was maintained to neutral level. Experimental data revealed decrease in hardness level also. |

LABORATARY EFFLUENT TREATMENT PLANT

Objective and Relevance:

Water is a vital resource that forms the basis of life. Ground water is usually of acceptable quality due to natural filtration through ground. The untreated water from laboratories and industries poses serious threat not only the environment but also to the ground water of the locality. An important aspect of ground water pollution is the fact that it persists underground for many years once it is polluted.

Knowing the importance of the quality of ground water, the department of Chemistry, Govt. Holkar Science College has planned to establish an Effluent Treatment Plant (ETP), the idea of laboratory Effluent Treatment Plant is an innovative and original concept design and developed by the Department of Chemistry, Govt. Holkar Science College, Indore The objective is to improve the quality of water to make it more acceptable for a specific end use.

Design of Plant & Principle:

Both physico-chemical processes are being involved in treatment like; sedimentation, filtration, chemical caugulation/flocculation, surface adsorption and aeration.

These processes will be carried out in the following steps:

- i) Sedimentation Chamber: The effluent from laboratory will be collected in this chamber. Large flocculated particles will settle down at the bottom of the chamber and sludge will be removed
- ii) Chemical Feed Chamber: The preliminary process in treatment is chemical clarification by coagulation and filtration for removal of impurities, depending upon the character of effluent. The pH is measured and than the required chemicals is used to treat effluent with constant stirring. The process will convert small flocks into higger size.
- (iii) Adsorption Duct: Charcoal is a remarkable absorber because of its large porous surface. The amount of purification depends upon the rate at which charcoal is exposed to impure water. The slower the water passes through the duct filled with charcoal the larger the time it is exposed to contaminants. We have a valve to regulate the rate of flow of water over charcoal. This varieties of impurities will be segregated here.
- iv) Aeration Chamber: The werator is submerged in water draw to atmospheric air below the water surface this creates fine bubbles and mixes air in water. Aeration water treatment is effective for the management of dissolved gases like CO₂, H₂S etc. and volatile organic compounds (VOCs). It is also effective in precipitating dissolved iron and manganese. In aeration, dissolved CO₂ is removed which further improves the pH of water.
- Sock Pit. This pit is especially filled with pebbles for further filtration before the treated water penetrates into the ground.
