A Parallel System with Arrival and Maximum Repair Time of the Server

Chitaranjan Sharma

Government Girls College Dhar M.P. India
e-mail: drcsharma3@gmail.com

An attempt has been made to discuss a parallel system of two identical units in which some arrival time is given to the server for carrying out repair activities. The server repairs the unit at its failure up to a maximum repair time. If repair of the unit by the server is not possible in the time, it is replaced by new one with some replacement time. The failure time of the unit and the time to which unit undergoes for replacement are exponentially distributed while the distributions of arrival time of the server, repair and replacement time of the unit are taken as arbitrary with different probability density function. The semi-Markov process and regenerative point technique are used to derive the expressions for various reliability measures of the system model. The graphical study of the results obtained for a particular case has also been made.

On the Strong Convergence for Negatively Orthant Dependent Random Variables

Zahra Shokooh Ghazani

e-mail: zah.shokooh_ghazani@iauctb.ac.ir

In this paper, we present some results on the complete convergence for arrays of negatively orthant dependent (NOD, in short) random variables by using the Rosenthal-type inequality, Kolmogorov exponential inequality and the truncation method. the result is an improvement of complete moment convergence and the Marcinkiewicz-Zygmund type strong law of large numbers for NOD random variables.
